Serial Cable Booster

The RelCom, Inc. Serial Cable Booster can double the maximum length of an RS-232C cable. This is done by actively receiving and re-transmitting the most common signal lines of the RS-232C interface. Under stable environmental conditions, when placed in the middle of the cable, the Serial Cable Booster can effectively more than double the maximum 50-foot cable allowed by RS-232C applications. This criterion also relates to the signal to noise ratio in that it is halved as compared to a long cable without a Serial Cable Booster. The unit is data rate and data format transparent.

Specifications:

Power:	Detachable AC Adapter, 120 VAC, 18 Watts; 240 VAC, 50 - 60 Hz, 0.2 Amp
Size:	0.75" x 2.25" x 3.25" (2.2 x 5.5 x 7.8 cm)
Weight:	0.1 lb. (0.05 kg)
Enclosure:	Plastic
Interface:	RS-232C/CCITT V.24
Protocol:	Asynchronous/Synchronous
Connectors:	(1) DB25M to DCE; (1) DB25F to DTE
